

# Redness Correction Emulsion

## What is Redness Correction Emulsion?

Redness Correction Emulsion is designed to immediately reduce the appearance of facial redness and to soothe and moisturize red and damaged skin. This product contains Therosol®, a patent pending ingredient, that has been clinically proven to improve skin dryness and texture of a four week period. Therosol plus two additional pure botanically derived ingredients, work together to reduce the appearance of redness and calm distressed skin. The presence of a green pigment in Redness Correction visibly reduces facial redness caused by rosacea and other forms of dermatitis. The product is gentle enough to use on rosacea and eczema prone skin without causing irritation.

## What are some of the ingredients in Redness Correction Emulsion?

### **Capric/Caprylic Triglyceride**

- This ingredient is a naturally occurring triglyceride from coconut oil, as well as from other plants. It is an extremely stable ingredient and is widely used in skin care products because it leaves a soft, non-greasy feel on the skin. It is also an excellent solvent for active ingredients. It is so gentle and safe for the skin that it is often used at concentrations as high or higher than 50% in cosmetic formulations.

### **Jojoba Oil**

- This oil is prepared from the seed of the jojoba plant and unlike many natural oils, is chemically very similar to the oil produced by sebaceous glands in the skin. It is a superior moisturizing emollient, which helps soften and smooth skin. It is so gentle and pure that jojoba oil can be applied to cracked and damaged skin to help moisturize and restore the skin's barrier.

### **Chromium Oxide Green**

- This is an inert green pigment that when applied to the skin minimizes the appearance of facial redness. The combination of green and red reflects off the skin's surface as neutral grey or beige because red and green are complementary colors. The result is that visible facial redness caused by rosacea and various forms of dermatitis is instantly reduced.

### **Squalane**

- Squalane can be obtained from an animal source (shark) or from a plant source (olives). Therametics' products ONLY contain squalane from olive oil. This unique oil boosts the skin's ability to hydrate and is a superior emollient. It is very similar to oils produced in the skin and is therefore an excellent choice to use in order to help repair damaged skin.

### **Therosol®**

- Therosol® is a proprietary and patent-pending botanically derived ingredient discovered by Therametics' scientists. Laboratory research studies on cultured human skin cells have shown that Therosol® can block the production of inflammatory hormones in a variety of skin and immune cells that cause vasodilation, irritation and skin damage.

## How do I use Redness Correction Emulsion?

After cleansing skin with Therametics' Foaming Facial Cleanser, apply Redness Correction Emulsion evenly and liberally to all affected areas of the skin. You may experience a mild tingling when the product is first applied, indicating that Therosol is penetrating into the skin. Because of its calming and moisturizing properties as well as its fast-absorbing properties, Redness Correction Emulsion can be applied as frequently as necessary to affected skin. For best results it should be used at least twice a day to improve skin appearance and softness. As with any product, if irritation develops, discontinue use.

## Are there any concerns regarding the use of Redness Correction Emulsion?

**No Sunscreen** - Redness Correction Emulsion does not contain any sunscreen. Because of this if the product is going to be applied in the morning to sun exposed areas, it is recommended that a lightly moisturizing lotion with an SPF of 15 or higher be applied to these areas after Redness Correction has completely absorbed into the skin.
